

**We carpeted the grease bay
in a gas station
to prove the effectiveness
of our carpet cleaning system.**

The system recommended by leading carpet manufacturers...

If We Can Clean This...

*Forty carpet samples, representing a wide range of fibers,
construction and design,
were used to carpet the grease bay in a busy Union 76 service station.*

To prove the effectiveness of Bane-Clene® systems and products, many test sites have been used to soil carpet samples prematurely. Warehouses, tire centers, garages, kennels and sundry other locations have been chosen in the past.

One of the most dramatic was a grease bay in a Union 76 gas station. The results offered positive proof that the system could reclaim even the most devastated carpet regardless of its fiber content or construction.

Carpet samples of wool, nylon, acrylic, polyester and polyolefin were fastened together with hot melt seaming tape and installed under a grease rack. Forty different types, styles, and fibers were included in the samples.

We Can Clean Anything!

*A light-colored, residential design was installed in a second grease bay.
Cut pile face yarns responded beautifully to the cleaning.*

A residential grade cut pile in an off-white color was placed under the other lift. Splashes of black, used motor oil soaked into the backing material. Every conceivable soiling agent found in a gas station was tracked onto the carpet and ground into the fibers and backing during the test period.

Special solvents removed the tar and undercoat material safely, and Bane-Clene's mild cleaning agents were used in conjunction with powerful cleaning equipment to restore the carpet samples to showroom condition.

Engineered with the assistance of major carpet manufacturers, Bane-Clene products are safe and gentle for all carpet fibers. If we can clean this abused carpet, we know we can clean your carpets.

If we can clean this... We can clean anything!
